

DATA SCIENCE  
FINAL PROJECT

# WILDFIRE RESTORATION PRIORITY CLASSIFICATION

BRITISH COLUMBIA

2025

# PROFESSIONAL BACKGROUND

I'm a Brazilian  
**Environmental Engineer**,  
technology enthusiast, and  
now a **Data Professional**

During the graduation, a passion for  
**ecological recovery** grew in my heart.

In my previous job experience, I noticed  
that to be a better professional and  
realize my dream, I needed to know  
how to manage **data**.

# PROBLEM STATEMENT

**Wildfires** are a growing concern in Canada.

This project aims to develop a **machine learning model** to identify areas that require priority for post-fire restoration.

# ENVIRONMENTAL FACTORS

## RESOURCES

- Burn severity
- Fire perimeters
- Community proximity
- Watershed proximity
- Roads Proximity
- Climate
- Land cover
- Elevation

## CORRELATED FEATURES

# BC CLIMATE MAPS ANALYSIS

# BC WILDFIRE ANALYSIS

## Climate features

Temperature

Humidity

Precipitation

## Other investigations

Land cover fire investigation

Wildfires causes through the years

Recovery priority (size-based)

Season investigation
